"Procollagen type I C-proteinase enhancer is a naturally connective tissue glycoprotein.";

Biochem. Biophys. Res. Commun. 173:81-86(1990).

-i- FUNCTION: BINDS TO THE COOH-TERMINAL PROPERTIDE OF TYPE PROCOLLAGEN AND ENHANCES PROCOLLAGEN C-PROTEINASE ACTION: Secreted.

-i- SUBCELLULAR LOCATION: Secreted.

-i- SUBCELLULAR LOCATION: Secreted.

-i- TISSUES, ESPECIALLY TENDON. ALSO EXPRESSED IN CONTAINS 1 NTR DOMAINS.

"Embryonic expression of mouse bone morphogenetic protein-1 (BMP-1),
which is related to the Drosophila dorsoventral gene tolloid and
encodes a putative astacin metalloendopeptidase.";

Dev. Biol. 163:175-183(1994).

-i- FUNCTION: CLEAVES THE C-TERMINAL PROPEPTIDES OF PROCOLLAGEN I, I:
AND II. INDUCES CARTILAGE AND BONE FORWATION.

-i- CATALYTIC ACTIVITY: Cleavage of the C-terminal propeptide at
Ala-1-Asp in type I and II procollagens and at Arg-1-Asp in type
               Glycoprotein;

"Cloning and expression of cDNA encoding Xenopus laevis bone
morphogenetic protein-1 during early embryonic development.";

Gene 134.257-261(1993).

-i- FUNCTION: INVOLVED IN PATTERN FORMATION IN GASTRULA AND LATER
DIFFERENTIATION OF DEVELOPING ORGANS.

-i- SUPPLOPMENTAL STAGE: BLASTULA, EARLY GASTRULA AND HATCHED
TADPOLES; LITTLE OR NO EXPRESSION IN MOROLA AND LATE GASTRULA.

-i- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

-i- SIMILARITY: CONTAINS 1 EGF-LIKE DOMAIN.

1. 90:753-762(1997).

FUNCTION: HIGH AFFINITY RECEPTOR FOR SEMAPHORINS 3C, 3F, VEGF-165 AND VEGF-145 ISOFORMS OF VEGF, AND THE PLGF-2 ISOFORM OF PGF.

SUBCELLULAR LOCATION: Type I membrane protein.

TISSUE SPECIFICITY: FOUND IN CERTAIN NEURONAL POPULATIONS OF THE CNS AND IN OTHER NONNEURONAL TISSUES INCLUDING MESENCHYMAL TISSUE LINING IN THE RIBS.

SIMILARTY: BELONGS TO THE NEUROPILIN FAMILY.

SIMILARITY: CONTAINS 2 CUB DOMAINS.

SIMILARITY: CONTAINS 1 MAM DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PF00629; MAM; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ned:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            number of hits satisfying chosen parameters:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A_Geneseq_101002:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        treating infections caused by microbes such as fungus, yeast, retrovirus (e.g. human immunodeficiency virus (HIV)), or pathogenic bacteria which are resistant to at least one antibiotic medicament or multiresistant. The polynucleotide encoding MASP-2 is useful for treating patients deficient in MASP-2. The invention also discloses MASP-2 assays which are useful for determination of MASP-2 activity or levels in patients suffering from e.g. infections, inflammatory disorders and spontaneous recurrent abortion. The pharmaceutical composition comprising MASP-2 inhibitor is useful for treating inflammatory disorders. The present sequence is human MASP-2 20 kDa fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to use of a polypeptide derived from mannan-binding lectin (MBL) associated serine protease-2 (MASP-2) for producing a pharmaceutical composition. MASP-2 is a complement fixing enzyme and involved in lectin pathway of complement activation the pharmaceutical composition comprising MASP-2 is useful for the pharmaceutical composition comprising MASP-2 is useful for
                                                                                                                                                                                        Human; mannan-binding lectin associated serine protease-2; MASP-2; MBL; complement fixation; infection; microbe; retrovirus; HIV; abortion; human immunodeficiency virus; pathogenic bacteria; inflammatory disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Use of a polypeptide comprising amino acid sequence derived from mannan-binding lectin associated serine protease-2 (MASP-2) for producing pharmaceutical composition, to treat bacterial, fungal,
                                                                                                                                                                                                                                                            Human mature MASP-2 protein.
                                                                                                                                                                                                                                                                                              17-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13-JUL-2000; 2000DK-0001089.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The pharmaceutical composition comprising MASP-2 is useful for treating infections caused by microbes such as fungus, yeast, retrovirus (e.g. human immunodeficiency virus (HIV)), or pathogenic bacteria which are resistant to at least one antibiotic medicament or multiresistant. The polynucleotide encoding MASP-2 is useful for treating patients deficient in MASP-2. The invention also discloses MASP-2 assays which are useful for determination of MASP-2 activity or levels in patients suffering from e.g. infections, inflammatory disorders and spontaneous recurrent abortion. The pharmaceutical composition comprising MASP-2 inhibitor is useful for treating inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to use of a polypeptide derived from mannan-binding lectin (MBL) associated serine protease-2 (MASP-2) for producing a pharmaceutical composition. MASP-2 is a complement fixing enzyme and involved in lectin pathway of complement activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Use of a polypeptide comprising amino acid sequence derived from mannan-binding lectin associated serine protease-2 (MASP-2) for producing pharmaceutical composition, to treat bacterial, fungal,

                                                                                                                                                                                                                                                                                                                                                                                                retrovirus (e.g. human immunodeficiency virus (HIV)), or pathogenic bacteria which are resistant to at least one antibiotic medicament or multiresistant. The polynucleotide encoding MASP-2 is useful for treating patients deficient in MASP-2. The invention also discloses MASP-2 assays which are useful for determination of MASP-2 activity or levels in patients suffering from e.g. infections, inflammatory disorders and spontaneous recurrent abortion. The pharmaceutical composition
                                                                                             The invention relates to use of a polypeptide derived from mannan-binding lectin (MBL) associated serine protease-2 (MASP-2) for producing a pharmaceutical composition. MASP-2 is a complement-fixing enzyme and involved in lectin pathway of complement activation. The pharmaceutical composition comprising MASP-2 is useful for treating infections caused by microbes such as fungus, yeast, the pharmaceuticum caused by microbes such as fungus, yeast,
                                                                                                                                                                                                                                 Use of a polypeptide comprising amino acid sequence derived from mannan-binding lectin associated serine protease-2 (MASP-2) for producing pharmaceutical composition, to treat bacterial, fungal,

The present sequence is human MASP-2 protein. Note: The present sequence is stated as being the same as SEQ ID NO:2 shown in sequence listing of the specification However the sequences differ at various locations.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 treating infections caused by microbes such as fungus, yeast, retrovirus (e.g. human immunodeficiency virus (HIV)), or pathogenic bacteria which are resistant to at least one antibiotic medicament or multiresistant. The polynucleotide encoding MASP-2 is useful for treating patients deficient in MASP-2. The invention also discloses MASP-2 assays which are useful for determination of MASP-2 activity or levels in patients suffering from e.g. infections, inflammatory disorders and spontaneous recurrent abortion. The pharmaceutical composition comprising MASP-2 inhibitor is useful for treating inflammatory disorders. The present sequence is human MASP-2 protein.

Note: The present sequence is stated as being the same as SEQ ID NO:2 shown in figure 6 of the specification (AAE14564).
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                     Claim 20;

The invention describes an isolated nucleic acid molecule (I) encoding a convel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative clisorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. acradiac arrest, cerebrovascular disorders e.g. acradiovascular disorders angiogenesis, nervous system disorders e.g. Alzheimer's disease and amplotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system conditions of the cellular level e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   08-NOV-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. acute kidney failure and blood related disorders e.g. myocardial infarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; gene therapy; neural disorder; immune system disorder; muscular disorder; reproductive disorder; gastrointestinal dipulmonary disorder; cardiovascular disorder; renal disorder; proliferative disorder; inflammation.

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' and can therefore be used to obtain full length cDNAs and genomic was. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs
                                                                   Claim 13;

EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed CDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; protease; PRTS; gastrointestinal disorder; peptic esophagitis; indigestion; gastritis; cardiovascular disorder; reproductive disorder; hypertensive heart disease; myocardial infarction; autoimmune disorder; inflammatory disorder; rheumatoid arthritis; cell proliferative disorder; arteriosclerosis; cancer; epithelial disorder; eczema; endometriosis;

AAB47559-69 show novel human proteases PRTS-1

The invention relates to a mannan-binding lectin (MBL) associated serine protease-3 (MASP-3) polypeptide. MASP-3 exerts an inhibitory effect on the complement activation particularly when bound to MBL/MASP-2 complexes and directly activates complement system through binding to MBL. The MASP-3 polypeptides, polynucleotides and modulators are useful for preparing a pharmaceutical composition for treating aberrant MASP-3 activity such as infections, cancer, MBL-deficiency, disorders of the

reproductive system diseases associated

associated with

cancer, MBL-deficiency, disorders of the ve system. The MASP-3 polypeptide is also ssociated with human immunodeficiency virus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       to -11. These proteases can be administered in pharmaceutical compount for the treatment of diseases or conditions associated with decreased expression of functional protease. Disorders which can be treated include gastrointestinal (peptic esophagitis, indigestion and gastritis), cardiovascular (hypertensive heart disease, myocardial infarction), autoimmune/inflammatory (rheumatoid arthritis), cell infarction), autoimmune/inflammatory (rheumatoid arthritis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            proliferative (arteriosclerosis, cancers), epithelial (neurological (Huntington's disease), and reproductive (disorders. This protein shows homology with the human P100 serine protease of Ra-reactive factor.

MASP-3 is also useful for treating an inflammatory condition resulting from an autoimmune condition after acute myocardial infraction or brain ischemia. It is also useful for treating an individual suffering from a disorder resulting from an imbalanced cytokine network. The
therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder (e.g. cancer or immune associated disorders) and a gestational disease (e.g. pre-clampsia). They are also used for screening for a modulator cactivity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX
                                                                                                                                             The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene
                                                                                                                                                                                                                                              Claim 1;
                                                                                                                                                                                                                                                                           Nucleic acids encoding secreted polypeptides, designated PROX polypeptides, useful for treating a syndrome associated with PROX-associated disorder, e.g. cancer - \,

                                                                                  The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder (e.g. cancer or immune associated disorders) and a gestational disease (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX AAF74418 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding secreted polypeptides, designated PROX polypeptides, useful for treating a syndrome associated with a PROX-associated disorder, e.g. cancer -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           disorder, e.g. a cell proliferation and/or differentiation disorder e.g. cancer or immune associated disorders) and a gestational disease (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated with a PROX associated with a PROX-associated with a PROX-associ

medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder (e.g. cancer or immune associated disorders) and a gestational disease
nootropic; neuroprotective; anticonvulsant; cerebroprotective; stroke; vasotropic; neuronal growth; growth factor-mediated chemotaxis; trauma; neurological disorder; muscular dystrophy; muscle injury; vulnerary; amyotropic lateral sclerosis; multiple sclerosis; ischaemia; diabetes;
                                                                                                                                                                                                                                                             Human; SEZ6; neural regeneration; seizure; infertility; gene therapy; stroke; Alzheimer's disease; Huntington's disease; myasthenia gravis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and antibodies are useful in the manufacture of a nucleic acids and acids acids and acids acids and acids acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human SEZ6 mature protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF71443 c to AAF7448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 1; Page 41-43; 166pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     В
                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                              other treatment modalities which may prevent, suppress or cure a pathology or disease associated with hSEZ6 activities. SEZ6 is also useful for treating abnormal primary or secondary sexual development, e.g., impotence, infertility or reduced libido. The hSEZ6 polynucleotide is useful for treating the above mentioned disorders by gene therapy techniques. The present sequence is human SEZ6 mature protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         disease. SEZ6 is useful for treating a patient suffering from a neurological disorder such as epilepsy, Alzheimer's disease, Parkinson's disease, seizure related disorder or a disorder associated with stroke. SEZ6 DNA is useful as probes for gene mapping and for detecting transcription, translation and/or expression of hSEZ6 polypeptide in human tissue. A transgenic animal is useful as an animal model in research and drug development procedures, and for testing compounds or research and drug development procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             growth factor-mediated chemotaxis, altered behavioural patterns, e.g., sleep or eating disorders and for treating neurological disorders such as trigeminal neuralgia, Bell's palsy, myasthenia gravis, muscular dystrophy, muscule injury, invertebrate disk syndrome, thoracic outlet destruction syndrome, amyotropic lateral sclerosis, multiple sclerosis, ischaemia associated with stroke, neuropathy associated with diabetes, spinal cord trauma, facial nerve crush and other trauma, Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human SE26 polypeptide useful for inducing neural regeneration, inhibiting neural degeneration, preventing seizures, and for treating infertility, Alzheimer's disease, stroke, seizures, Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2002-082840/11.

SEZ6 is useful for treating a patient suffering from a neurological disorder such as epilepsy, Alzheimer's disease, Parkinson' disease, seizure related disorder or a disorder associated with stroke. SEZ6 DNA is useful as probes for gene mapping and for detecting transcription, translation and/or expression of hSEZ6 polypeptide in human tissue. A transgenic animal is useful as an animal model in research and drug development procedures, and for testing compounds or other treatment modalities which may prevent, suppress or cure a pathology or disease associated with hSEZ6 activities. SEZ6 is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        growth factor-mediated chemotaxis, altered behavioural patterns, e.g., sleep or eating disorders and for treating neurological disorders such as trigeminal neuralgia, Bell's palsy, myasthenia gravis, muscular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel human SE26 polypeptide useful for inducing neural regeneration, inhibiting neural degeneration, preventing seizures, and for treating infertility, Alzheimer's disease, stroke, seizures, Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vasotropic; neuronal growth; growth factor-mediated chemotaxis; trauma; neurological disorder; muscular dystrophy; muscule injury; vulnerary; amyotropic lateral solerosis; multiple sclerosis; isochaemia; diabetes; epilepsy; Parkinson's disease; sexual development; gene mapping;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     dystrophy, muscle injury, invertebrate disk syndrome, thoracic outlet destruction syndrome, amyotropic lateral sclerosis, multiple sclerosis, ischaemia associated with stroke, neuropathy associated with diabetes, spinal cord trauma, facial nerve crush and other trauma, Huntington's

PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated

                                                                                                                                                                                                                                                                                                                                                                              The present invention describes isolated nucleic acids encoding secreted polypeptides, designated PROX polypeptides (i.e. a PRO polypeptide where X is an integer from 1 to 17). PROX polypeptides have cytostatic, immunomodulatory and reproduction activities, and can be used in gene therapy, and as PROX antagonists and PROX agonists. PROX polypeptides, nucleic acids and antibodies are useful in the manufacture of a medicament for treating a syndrome associated with a PROX-associated disorder, e.g. a cell proliferation and/or differentiation disorder (e.g. cancer or immune associated disorders) and a gestational disease (e.g. pre-clampsia). They are also used for screening for a modulator of activity or of latency or predisposition to a PROX-associated disorder. AAF74432 to AAF74448 encode the specifically claimed human PROX polypeptides PRO1 to PRO17 given in AAB70531 to AAB70547.
                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 1; Page 28-31; 166pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acids encoding secreted polypeptides, designated PRO polypeptides, useful for treating a syndrome associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            11-AUG-1999; 99US-0148433.
